

Virtual Access to Care Workshops

Are you or members of your family or friends accessing or not able to access virtual care for any of these services?

- IBD
- Lung Disease
- HIV
- Trauma & Ortho
- Urology
- Renal

Do join a workshop bringing people accessing and not being able to access virtual care and the NHS together to develop better approaches in your community. We would love it if you could come with the people who are helping you at home. You will meet clinicians and health professionals from Guys and St Thomas, King's College Hospital, local community and primary care services, and together discuss how to better manage Virtual Access to Care.
